EDUCATION

Thapar Institute of Engineering and Technology
Bachelor of Technology in Computer Science and Engineering

Patiala, Punjab
Aug. 2023 – June 2027

EXPERIENCE

SDE Intern

June 2025 – December 2025

Recruitment and Assessment Centre (RAC), DRDO

New Delhi

- Automated manual expert selection by building AI-driven pipelines, **eliminating hours of manual effort per request** and enabling scalable recommendations across **multiple domains**.
- Enhanced recommendation accuracy by integrating real-time data streams and intelligent matching algorithms, laid the foundation for **production deployment under DRDO protocols**.

Samsung Prism Research Intern

Jan 2025 – June 2025

Samsung Pvt Ltd, India

Bengaluru

- Cut worklet creation time from **3–4 hours to 5-10 minutes** by engineering an AI-driven system using **LLMs and RAG** to autonomously generate novel worklet concepts from historical data.
- Boosted researcher productivity by **80%** by developing a streamlined web interface and data ingestion pipeline, incorporating **web scraping and OCR** for automated input processing.
- Achieved **faster information retrieval** as measured by a **45% improvement** by leveraging **asynchronous functions** and **parallel processing**.

Backend & DevOps Intern

Dec 2024 – Feb 2025

LMTSM

Patiala, Punjab

- Drove a **30% increase** in sales by improving product reach through a student startup listing platform with **fuzzy search** and optimized database indexing.
- Achieved **40% faster release cycles** by reducing deployment time through workflow automation with **GitHub Actions**.

PROJECTS

AI-Driven Expert Recommendation Engine - SIH Winning Project

- Built a **scalable recommendation system** to automate expert selection for DRDO, eliminating manual effort and streamlined panel formation using **optimized RESTful APIs** and **real-time data pipelines**.
- Expanded expert coverage and improved **selection accuracy** by integrating automated data extraction pipelines, enabling stakeholders to access a broader and more reliable expert database across diverse technical domains.

AI-Powered Document Query Engine | [\[Live Demo\]](#) | *LangGraph, LLMs, Vector Databases, Web Retrieval*

- Built an **internal knowledge tool** that designed to handle **multi-format documents**, enabling faster access to business-critical information via **semantic chunking** with page-level metadata and **vector search**.
- Improved **query accuracy** and client usability by integrating a **rephraser LLM** and a **retrieval-augmented pipeline**, ensuring complete answers even when local sources were insufficient.

TECHNICAL SKILLS

Languages: Python, C++, Typescript

Frameworks: FastAPI, Express.js, LangGraph

Tools: Docker, Kubernetes, AWS, Digital Ocean, GitHub Actions

Databases: PostgreSQL, MongoDB

ACHIEVEMENTS

- Winner among **400+** teams at Smart India Hackathon (SIH 2024) for developing an AI-driven expert recommendation engine. The solution was later adopted by **DRDO** and converted into an internship opportunity
