EDUCATION

Thapar Institute of Engineering and Technology
Bachelor of Technology in Computer Science and Engineering

Patiala, Punjab
Aug. 2023 – June 2027

EXPERIENCE

SDE Intern

June. 2025 – Present

Recruitment and Assessment Centre (RAC), DRDO

Remote

- Working with RAC, DRDO to deploy a scalable expert recommendation system, ensuring adherence to government protocols for data handling, system integration, and operational efficiency.
- Extending core functionalities by integrating real-time data pipelines and intelligent matching algorithms, improving the precision and adaptability of expert-panel recommendations across diverse technical domains.

Samsung Prism Research Intern

Jan. 2025 – June. 2025

Samsung Pvt Ltd, India

Remote

- Building an AI-powered worklet generation system leveraging LLMs and agentic frameworks based on previous worklets, leveraging LLMs and agentic frameworks.
- Designing and implementing a web interface for user input, Reducing worklet generation time to under 5 minutes, enhancing efficiency
- Conducting a literature survey and finalizing the architecture, Authoring a research paper on AI-driven worklet generation and a working prototype.

Backend & DevOps Intern

Dec. 2024 – Feb. 2025

LMTSM,

Patiala, Punjab

- Developed a platform for students to list their startups, improving visibility and networking opportunities.
- Implemented advanced features like fuzzy search and optimized database indexing for better performance.
- Gained hands-on experience in DevOps: set up servers, configured CI/CD pipelines, managed DNS records, worked with static IPs, and implemented load balancing using Nginx as a reverse proxy.
- Enhanced backend performance and deployment workflows, improving scalability, reliability, and fault tolerance

PROJECTS

AI-Driven Expert Recommendation Engine - SIH Winning Project

- * Designed and implemented a scalable backend system to manage expert profiles, interview panels, and candidate data, with optimized RESTful APIs ensuring efficient data flow and fast response times across services.
- * Integrated automated data extraction and processing pipelines to expand and enrich the expert database beyond DRDO, significantly enhancing panel member selection through broader and more accurate data coverage.

Resourcify - Enterprise System for the Indian Army | *Django, PostgreSQL, Vue.js, Docker, AWS*

(Patiala Cantonment)

2024

- * Engineered robust backend services for a custom ERP system tailored to the operational needs of a military cantonment, enhancing efficiency in manpower management, task allocation, and resource tracking.
- * Optimized data handling and integration processes to ensure seamless communication between various modules, supporting scalability and long-term system maintainability.
- * Partnered closely with a cross-functional team of four, aligning backend functionality with frontend requirements and user needs to achieve smooth system integration and high performance.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript, Typescript, Go

Frameworks: React.js, Django, FastAPI, Express.js, TensorFlow, PyTorch, LangChain

Tools: Docker, Kubernetes, Amazon Web Services, Digital Ocean

Databases:MySQL, PostgreSQL, MongoDB,Redis

ACHIEVEMENTS

- Winner of Smart India Hackathon (SIH 2024) India's Biggest Hackerthone
